Rantings of a semi-conscious graduate student -- take with a grain of salt.

### Docker Compose Hint

Posted by chathaway on May 2, 2017, 2:04 p.m.

If you are having trouble installing the correct version of docker-compose on Ubuntu, here's my hint: do not run "apt install docker-compose". Instead, follow the directions on their site (<https://docs.docker.com/compose/install/>).

Yes, I know it's super lame and stops you from getting automatic updates. But I mean, at least it works.
